

- **Architecture and Requirements Traceability**
- **Compliance Documentation and Reporting**
- **Informed Asset Investment Decisions**

“**ACART, TO ME, IS A MOST IMPRESSIVE PRODUCT. IT IS INTUITIVE, YET ONE CAN ACCOMPLISH MANY ARCHITECTURE-RELATED ISSUES WITH THIS SOFTWARE.**”

Mr. Bruce Reynolds

Senior Analyst for a company that provides financial management support to the federal government

// THE CHALLENGE

Navigating thousands of multi-level system requirements, architectures, laws, regulations, policies, guidelines and checklists is a challenge for federal executives and program compliance managers.

- How do I effectively keep track of which requirements apply to my planned scope of analysis?
- How do I make more informed asset investment decisions that I can support and defend?
- How do I accurately pinpoint where corrective compliance action is needed and the nature of that action?

ACART[™] can help.

// THE SOLUTION

ACART is an interactive application that assesses, filters and federates a vast number of enterprise requirements. ACART supports compliance managers by documenting and reporting relevant systems and architecture compliance information. ACART filters the enterprise architecture requirements to extract what is relevant to a user's defined scope of interest (e.g. system architecture compliance for the federal architecture level). ACART provides an intuitive way to assess, document and store a system or group's scope and state of compliancy, enabling the execution of informed decisions, strategies and tactical actions.

// FEATURES

- **Requirements Filtering and Scoping** – Automatically filter and scope thousands of requirements. Extract relevancy and context for what is within a use-defined scope of interest.
- **Requirements to Compliance Alignment** – Link and align multi-level enterprise architectures within a federated environment to meet compliance objectives.
- **Compliance Assertion** – Document a program's scope and state of compliancy and assert a program's compliance plans.
- **Integrated Compliance Reports** – Save, query and search historical records. Track and report compliance progress toward achieving pre-certification authority (PCA) approval and IRB certification.
- **Plug-n-Play Requirements Modules** – Quickly and easily add requirement sets into ACART to extend compliance analysis.
- **In/Out-Scope Activity Lists** – Develop tactical actions to achieve compliancy.

To arrange a demo or to speak to someone regarding ACART, please contact Malcolm Slovin at 703.742.0585

EM&I boasts a rare 100 percent client satisfaction rate. Customers include:

Defense Business Transformation Agency, U.S. Army, U.S. Air Force, U.S. Navy, and numerous others...

ACART PROVIDES THE LOGIC TO SORT AND MAP A VAST NUMBER OF ENTERPRISE REQUIREMENTS AND PRODUCE TARGETED REPORTING ON THOSE THAT ARE PERTINENT TO YOUR SCOPE.

Requirements & Architectures

Laws, Regulations & Policies (LRP) + Guidelines & Checklists

Enterprise Requirements Compliance

• Program/Agency Requirements
• Systems Architectures
• Weapons Architectures

• A-123
• BEA/FEA
• Clinger-Cohen
• DoD 5000
• FISMA
• GPR

// STEP 1 - INPUT

- Enter diverse requirements, architectures and LRP's into ACART as containers.
- Input varying organizational levels, scopes and different formats.

// STEP 2 - NAVIGATE

- Map and trace requirements across all organization levels and provide context.
- Navigate your complex set of requirement hierarchies.
- Assess compliance to those requirements.
- Filter and sort non-relevant requirements.

// STEP 3 - REPORT

- View dashboard reporting of compliance status.
- Compare multiple systems scope and compliance (trade-off analysis).
- Perform side-by-side analysis on multiple compliance assessments.
- Make informed investment decisions.
