

# ACART Module Pricing (Government – Yearly)

| Product  | Description   | Cost/Per seat License or Unit Cost | Yearly License Fees   | Recommended Consulting Fees                                      | Minimum Purchase Required |
|--|---|------------------------------------|---|--|---------------------------|
| <b>ACART Compliance Assessment Module</b>                | The core module used to document compliance to a set of requirements  | 2.4 k/License                      | 48k (minimum – cost for 20 licenses)                        | Minimum of 5-10k required for tool and environment configuration | 20 licenses               |
| <b>ACART Discovery Service Module</b>                    | Web service used to enable ACART users to search registered containers  | NA                                 | 7.5k (fixed fee, whether 1 or 1,000 licenses are purchased) | NA   |                           |
| <b>ACART System Analysis Module</b>                      | Business intelligence tool to enable portfolio analysis   | NA                                 | 50k (Fixed fee, whether 1 or 1,000 licenses are sold)       | NA   |                           |
| <b>ACART Federation Module</b>                           | Utility used to align/integrate/federate 2 or more architectures/containers. Includes the Federation client and server software plus, Federation Intelligence module and the Federated Compliance module. | NA                                 | 150k (Fixed fee, whether 1 or 1,000 licenses are sold)      | Minimum of 15k required for tool and environment configuration   |                           |
| <b>ACART Enterprise Architecture Compliance Training</b> | Half day course on EA compliance and the use of ACART software  | 1.4k/student                       | NA  |  | 5 students                |
| <b>ACART Technical Administration Training</b>           | 1 day course on the configuration and technical administration of ACART   | 2.5k/student                       | NA  |  | 5 students                |

- The license provides the rights to register up to 2 functionally distinct architectures (e.g., containers). For every additional architecture that is registered the client must pay an additional 50K.
- ACART Federation Module must be coupled with ACART Compliance Assessment Module.
- ACART Requires consulting services to configure and implement the software

# ACART Package Pricing (Government – Yearly)

| Package            | Description   | Labor Value (Initial Set-up) | Yearly License Fee | Package Cost | Licenses   |
|--------------------|---|------------------------------|--------------------|--------------|------------|
| ACART Accelerator* | The compliance module with enterprise licenses. Includes the standard reports and dashboard module. | 16k                          | 150k               | 166k         | Enterprise |
| ACART Plus*        | Includes the ACART Accelerator plus the Discovery and System Analysis module                        | 16k                          | 200k               | 216k         | Enterprise |
| ACART Deluxe**     | Includes ACART Accelerator, ACART Plus, and ACART Federation module                                 | 50k                          | 340k               | 390k         | Enterprise |

\*ACART Accelerator and ACART Plus Notes: Labor represents the cost for a fixed number of hours, based on historical data, needed to perform an installation of the ACART software and a configuration for one container. Assuming the client container is well structured (e.g., in a reasonably well designed relational database), an implementation of ACART with only one container typically requires two weeks for one FTE (e.g., 80hrs). If an implementation requires more time (because the client does not have a relational database that stores their requirements and/or a well defined compliance process) the clients will need to issue a separate task order to synthesize their container and document the compliance process. The labor value was calculated using a \$200/hr rate.

\*\*ACART Deluxe Notes: Labor represents the cost for a fixed number of hours needed to perform an installation of the ACART software, a configuration for two containers and the configuration of the Federation module. If an implementation requires more time (because the client does not have a relational databases that store their requirements and/or do not have a federation plan/strategy) the clients will need to issue a separate task order to synthesize their containers and formulate a plan/federation strategy.

# Implementation Activities

## ACART Accelerator and Plus Package

### Interview/Inventory

- » Attain a copy of the compliance guidance
- » Define the Sieve process
- » Define the assertion values
- » Attain and perform a quality inspection of the container (e.g., Architecture/Requirements)
- » Evaluate technical infrastructure
- » Collect/determine application settings

### Install

- » Establish technical environment
- » Install the ACART software

### Configure

- » Configure application settings
- » Configure the Sieve
- » Configure dashboard reports
- » Configure license

### Wrap-up

- » Unit test
- » Client demo
- » Refine configuration

## ACART Deluxe

### Interview/Inventory

- » Attain a copy of the compliance guidance
- » Attain a copy of the federation strategy
- » Define the Sieve process
- » Define the assertion values
- » Define container alignment values
- » Attain and perform a quality inspection of the containers (e.g., Architecture/Requirements)
- » Evaluate technical infrastructure
- » Collect/determine application settings

### Install

- » Establish technical environment
- » Install the ACART software

### Configure

- » Configure application settings
- » Configure the Sieve
- » Configure the Federation module
- » Configure dashboard reports
- » Configure license

### Wrap-up

- » Unit test
- » Client demo
- » Refine configuration
